

Creating an Agile Workforce through SCRUM

A project management framework that emphasizes teamwork and accountability.

Program Details

What is SCRUM?

Scrum is an agile project management framework that teams use to develop, deliver, and sustain complex products. It describes a set of meetings, tools, and roles that work in concert to help teams' structure and manage their work. Teams of all kinds can benefit from the use of Scrum; HR, marketing, design, software development, engineering and more. It is a favorite framework for many development teams, as requirements change, goals change, situations change, scrum embraces those changes. It encourages teams to learn through experiences, self-organize while working on a problem, and reflect on their wins and losses to continuously improve.

Training Outcomes

On behalf of your organization, we help you:

- Learn how to deliver each milestone, reprioritize when needed and constantly improve.
- Learn to break down big, complex projects into smaller pieces.
- Create regularity and help your teams maintain transparent, clear communication, adapt to change, and continuously learn.
- Overcome many of the recurring problems people often experience in waterfall projects.
- Shorten iterations to reduce risk and cost and get fast feedback from users.
- Increase speed to market and see value quicker.

Training Length

Half Day
